WWW: Bold Profile

I am a third-year Computer Science B.Tech student with a good academic track record and a keen interest in technology, software development, and project management. Proficient in web development and Machine Learning, I have practical experience in developing responsive and user-friendly applications using HTML, CSS, JavaScript, and React.js. I also possess expertise in Java and Python, as well as a thorough understanding of object-oriented concepts, data structures, and algorithms. I have knowledge of backend technologies and databases, including MongoDB, and experience in crafting and integrating RESTful APIs. Apart from my technical skills, I am skilled in team coordination, timelines, and managing quality standards for project deliverables. I am conversant in Agile and Scrum workflows and have practical experience working with GitHub and Trello as tools to track tasks and collaborate. Strong organizational and leadership abilities, I weigh technical input against good project planning and execution while communicating well with cross-functional groups, collecting requirements, and coordinating technical solutions with project objectives. Agile learner and eager team player, I look actively for new technologies, look for innovation opportunities, and implement successful solutions, and am excellent at adapting to rapid environments and driving technology innovation.

Skills

- Programming in Java
- AI&ML
- SQL
- Task prioritization
- Web Development
- Git & Github
- MS office
- Python Developer

Projects and Experience

Harmony(AI Playlist Maker)

- Developed a smart music playlist generator leveraging AI algorithms to analyse user preferences, mood, and genre inputs for personalised playlists.
- Implemented machine learning techniques for mood classification and recommendation logic.
- Integrated external APIs to fetch song data and applied filtering and ranking methods to improve user experience.
- Designed the system for scalability and enhanced user interaction.
- [Link](#)

Expense Tracker

- Built a desktop-based expense tracking system with Java Swing and MySQL for managing daily expenses.
- Implemented spending limit alerts and integrated interactive charts (Pie/Bar) using JFreeChart for financial insights.
- Applied OOP principles, JDBC, and SQL queries to deliver a robust and user-friendly full-stack desktop application.
- [Link](#)

Zerodha Clone

- Developed a full-stack web application with React.js for the frontend and MongoDB for the backend.
- Designed responsive and dynamic user interfaces using React.js components and state management.

- Implemented backend logic and RESTful APIs to handle MongoDB data storage, retrieval, and updates.
- Ensured seamless integration between frontend and backend for a smooth user experience and real-time data updates.
- Focused on performance optimization, scalability, and maintainable code architecture.

Education

B. Tech in Computer Science with Ai&ML Expected in May 2027
S.R.M Institute Of Science And Technology, Chennai, Tamil Nadu

- [8.5] GPA/CGPA

Languages

Hindi

English

Korean

Certifications

Programming in Java, NPTEL
Data Analyst, Trainity
Data Analytics Essentials, CISCO
Programming in C, Udemy
